the 1990s, the number of people in the UK who are aged 65 and over has increased by 1.5 million (1990–2000) and is projected to increase by a further 1.5 million by 2020 (Office for National Statistics 2001). The number of people aged 65 and over who are living alone has increased from 1.1 million in 1990 to 1.5 million in 2000 (Office for National Statistics 2001). The number of people aged 65 and over who are living alone is projected to increase to 2.1 million by 2020 (Office for National Statistics 2001).

There is a growing awareness of the need to address the needs of older people living alone. The Department of Health (2000) has identified the need to develop a national strategy for older people living alone. The strategy should focus on the needs of older people living alone who are at risk of isolation and loneliness. The strategy should also focus on the needs of older people living alone who are at risk of poverty and social exclusion.

The first part of the paper discusses the importance of understanding the local context in which a project is implemented. This includes a thorough analysis of the social, economic, and cultural factors that may influence the success or failure of the intervention. The second part of the paper presents a detailed description of the project itself, including its objectives, activities, and the resources that were mobilized to implement it. The third part of the paper discusses the challenges that were encountered during the implementation of the project, and the strategies that were used to overcome these challenges. The fourth part of the paper presents the findings of the evaluation, including the extent to which the project achieved its objectives, and the impact that it had on the community. The final part of the paper discusses the implications of the findings for future practice, and the lessons that can be learned from the experience.
