the 1990s, the number of people in the UK who are employed in the public sector has increased by 1.5 million (from 2.5 million in 1980 to 4 million in 1999). The public sector has also become an important employer of people with disabilities. In 1999, 1.5 million people were employed in the public sector, of whom 100,000 were people with disabilities (Department of Social Security, 2000).

There is a growing awareness of the need to ensure that people with disabilities are able to participate in the labour market. The Department of Social Security (2000) has set a target of 10% of the public sector workforce to be made up of people with disabilities by 2005. This target is based on the fact that 10% of the population has a disability.

The Department of Social Security (2000) has also set a target of 10% of the public sector workforce to be made up of people with disabilities by 2005. This target is based on the fact that 10% of the population has a disability. The Department of Social Security (2000) has also set a target of 10% of the public sector workforce to be made up of people with disabilities by 2005. This target is based on the fact that 10% of the population has a disability.

The Department of Social Security (2000) has also set a target of 10% of the public sector workforce to be made up of people with disabilities by 2005. This target is based on the fact that 10% of the population has a disability. This target is based on the fact that 10% of the population has a disability.

the 1990s, the number of people in the world who are under 15 years of age is expected to increase from 1.1 billion to 1.4 billion.

As the world's population grows, the demand for food and other resources will increase. This will put pressure on the environment and on the world's food supply. It is important that we find ways to meet this demand without harming the environment or the world's food supply.

One way to do this is to use sustainable agriculture. Sustainable agriculture is a way of farming that uses natural resources in a way that will not harm them. It uses methods that will not harm the environment and will not use up the world's food supply.

Another way to do this is to use sustainable development. Sustainable development is a way of using the world's resources that will not harm the environment and will not use up the world's food supply. It uses methods that will not harm the environment and will not use up the world's food supply.

There are many other ways to do this. We need to find ways to meet the world's demand for food and other resources without harming the environment or the world's food supply. We need to find ways to use the world's resources in a way that will not harm the environment and will not use up the world's food supply.
