the 'information' and 'communication' fields. The 'information' field is defined as:

...the study of the nature, use and management of information, and the development of the means of its acquisition, storage, dissemination and communication. (p. 1)

The 'communication' field is defined as:

...the study of the nature, use and management of communication, and the development of the means of its acquisition, storage, dissemination and communication. (p. 1)

These definitions are very similar, and the only difference is the use of the word 'information' in the first and 'communication' in the second.

The 'information' field is defined as:

...the study of the nature, use and management of information, and the development of the means of its acquisition, storage, dissemination and communication. (p. 1)

the 1990s, the number of people in the UK who are aged 65 and over has increased from 10.5 million to 12.5 million, and the number of people aged 75 and over has increased from 4.5 million to 6.5 million (Office for National Statistics 2000). The number of people aged 65 and over is projected to increase to 15.5 million by 2020, and the number of people aged 75 and over to 8.5 million (Office for National Statistics 2000).

There is a growing awareness of the need to develop strategies to meet the needs of the ageing population. The Department of Health (1999) has published a strategy for ageing, which sets out the government's commitment to improve the lives of older people. The strategy is based on three main principles: (1) to ensure that older people have the opportunity to live independently and actively; (2) to ensure that older people have access to the services and support they need; and (3) to ensure that older people are treated with respect and dignity.

The strategy is based on the following assumptions: (1) that older people are a diverse group with different needs and interests; (2) that older people should be able to live independently and actively; (3) that older people should have access to the services and support they need; and (4) that older people should be treated with respect and dignity. The strategy sets out a range of measures to be taken to improve the lives of older people, including: (1) to improve the physical environment; (2) to improve the social environment; (3) to improve the financial environment; and (4) to improve the health and social care environment.
