the 1990s, the number of people in the world who are under 15 years of age is expected to increase by 1.5 billion.

As the world's population grows, the demand for food and other resources will increase. This will put pressure on the environment and on the world's food supply. It is important that we find ways to meet this demand without harming the environment or the world's food supply.

One way to do this is to use sustainable agriculture. Sustainable agriculture is a way of farming that uses natural resources in a way that will not harm them. It uses techniques that will not deplete the soil or the water, and it uses resources that are renewable.

Another way to do this is to use sustainable forestry. Sustainable forestry is a way of managing forests that will not harm the forest. It uses techniques that will not deplete the forest or the soil, and it uses resources that are renewable.

There are many other ways to meet the world's demand for food and other resources without harming the environment or the world's food supply. It is important that we find these ways and use them to meet the world's demand.

One of the most important ways to do this is to use sustainable agriculture. Sustainable agriculture is a way of farming that uses natural resources in a way that will not harm them. It uses techniques that will not deplete the soil or the water, and it uses resources that are renewable.

the 1990s, the number of people in the UK with a long-term condition has increased by 50% (Department of Health 2000). The prevalence of long-term conditions is also increasing in other countries (e.g. Australia, Canada, France, Germany, Italy, Japan, the Netherlands, Norway, Sweden, Switzerland, Taiwan, the USA and the Netherlands) (World Health Organization 2002).

Long-term conditions are a major cause of disability and are a leading cause of death in the UK. The prevalence of long-term conditions is increasing in the UK and in other countries (e.g. Australia, Canada, France, Germany, Italy, Japan, the Netherlands, Norway, Sweden, Switzerland, Taiwan, the USA and the Netherlands) (World Health Organization 2002).

the 1990s, the number of people in the UK who are aged 65 and over has increased by 1.5 million, and the number of people aged 75 and over has increased by 1.2 million (Office for National Statistics 2000). The number of people aged 65 and over is projected to increase to 6.5 million by 2020, and the number of people aged 75 and over to 4.5 million (Office for National Statistics 2000).

There is a growing awareness of the need to address the health and social care needs of older people. The Department of Health (2000) has set out a strategy for the NHS to meet the needs of older people. The strategy is based on three main principles: (1) to ensure that older people have access to the services they need; (2) to ensure that older people are treated with respect and dignity; and (3) to ensure that older people are able to live independently and actively. The strategy is being implemented through a number of initiatives, including the development of new services, the training of staff, and the promotion of good practice.

One of the key initiatives is the development of new services to meet the needs of older people. This includes the development of new services for the prevention and treatment of age-related conditions, such as dementia, and the development of new services to support older people with long-term conditions, such as heart disease and diabetes. The NHS is also investing in the development of new services to support older people with mental health problems, and the development of new services to support older people with physical disabilities.

Another key initiative is the training of staff to meet the needs of older people. The NHS is investing in the training of staff in a number of areas, including the training of staff in the prevention and treatment of age-related conditions, the training of staff in the support of older people with long-term conditions, and the training of staff in the support of older people with mental health problems. The NHS is also investing in the training of staff in the support of older people with physical disabilities.

A third key initiative is the promotion of good practice. The NHS is promoting good practice in a number of areas, including the promotion of good practice in the prevention and treatment of age-related conditions, the promotion of good practice in the support of older people with long-term conditions, and the promotion of good practice in the support of older people with mental health problems. The NHS is also promoting good practice in the support of older people with physical disabilities.

The NHS is also investing in the development of new services to support older people with long-term conditions, such as heart disease and diabetes. The NHS is also investing in the development of new services to support older people with mental health problems, and the development of new services to support older people with physical disabilities. The NHS is also investing in the development of new services to support older people with dementia, and the development of new services to support older people with Alzheimer's disease.

The NHS is also investing in the development of new services to support older people with long-term conditions, such as heart disease and diabetes. The NHS is also investing in the development of new services to support older people with mental health problems, and the development of new services to support older people with physical disabilities. The NHS is also investing in the development of new services to support older people with dementia, and the development of new services to support older people with Alzheimer's disease.

The NHS is also investing in the development of new services to support older people with long-term conditions, such as heart disease and diabetes. The NHS is also investing in the development of new services to support older people with mental health problems, and the development of new services to support older people with physical disabilities. The NHS is also investing in the development of new services to support older people with dementia, and the development of new services to support older people with Alzheimer's disease.

The NHS is also investing in the development of new services to support older people with long-term conditions, such as heart disease and diabetes. The NHS is also investing in the development of new services to support older people with mental health problems, and the development of new services to support older people with physical disabilities. The NHS is also investing in the development of new services to support older people with dementia, and the development of new services to support older people with Alzheimer's disease.
